Dear Janice Wanveri,

How are you? I read that you like going on picnics with your family, me too. I also read that you like blue and purple. My favorite color is blue and I also like purple.

I learned a lot with your book about the Hippopotums. One of the things I learned was that the hippopotums dese camouflage. I find these intresting because who would want to hunt this enormous and deadly creature. Another fact I learned was that that the population is 15,000-125,000! That

must be a lot hippopotums.
I also learned that the
hippopotums has many predators. One
of the preditors was the spotted
hyena. I think the hyena is small
and weak compared to a hippopotums.
At the end you asked three
questions. And I had to awnser them
.Well I have the awnsers for you.
Question number one was does hippopotums
camuflyg? Yes it does in the
water. Number two why does
my animals migrate? It migrate
for food. Number three name two
things that my animal eats? Grass
and plants.
I liked this book alot.

Thank you for sharing it. I enjoyed it very much.

Sincerly,
your penpal Simon
